2023 Outlook Theme #2: Markets were Buoyed by Lower Rates

By Benjamin B. Wallace, CFA

Benjamin B. Wallace, CFA - Portfolio Manager, Research Director

2022 was a challenging period for most segments of the market, epitomized by the poor performance of the typical “60/40” portfolio. Despite the uncertainty of Q1’23, markets reversed course and rose. The question is whether this is sustainable

60/40 Portfolio Rolling 12 month Return & Attribution

Chart 1

In 2022, the typical 60/40 balanced portfolio (60% stocks, 40% bonds) was down 16%. Chart 1 shows the rolling 12 month returns for 60/40, using S&P 500 and Barclays Aggregate total returns, as well as the contribution of stocks (S&P 500, in blue) and bonds (Barclays Aggregate, in red). For the period ending 12/31/22, trailing 12-month returns were -16%.

Fortunately, Q1’23 saw a reversal of most of 2022’s market trends, and, thanks to returns of 7% for the S&P 500 and 3%

for the Barclays Agg, a 60/40 portfolio was up 5.6% in Q1'23, improving trailing 12 month returns to -7%.

There were two keys to this. First, valuations were much better on 12/31/22 than 12/31/21, lowering the bar for expectations. Second, the main driver of 2022's decline, the 10yr Treasury rising from 1.51% to 3.88%, also saw a reversal in Q1'23, falling to 3.49%. Determining if Q1's performance can continue requires checking on these two factors.

Chart 2

Looking at valuation first, Chart 2 shows the EPS yield on the S&P 500 and the yield to maturity on the Bloomberg Barclays Agg, as well as a “60/40” mix of the two. It reached 5.40% on 12/31/22, and is still appealing at 5.10% on 3/31/23. It's not as good as 5.8% where, on 9/30/22, the current market recovery got underway. But it is much better than 3.5% back on 12/31/21. Future returns are never guaranteed, as economic events are unknown, but better valuation tilts the odds in investors' favor. At current levels valuation is decent.

The second key is the direction of the 10yr yield. During the first two months of Q1'23, rates were steadily moving higher, and this was a headwind to both Equity and Fixed Income returns. Then in March, as the markets digested the emerging banking issues, the result was a drop in rates, with the 10yr going from 4.08% on 3/2, to its quarter end close over 50 bps lower. The irony is that the decline was on economic uncertainty, yet the impact was to support market valuations.

In Q1'23, *Markets were Buoyed by Lower Rates* but, there is a very obvious catch to performance for the rest of 2023. If bond yields are correct to be lower, that would suggest a more challenging economic environment, and one that would pressure equity markets, as profit concerns would begin to outweigh valuation benefits. On the other hand, if the issues in the banking sector really are manageable, then the driver of lower rates will fade, and interest rates could again rise,

which would be a headwind for valuation of both stocks and bonds. While 60/40 got a boost from both the Equity and Fixed Income components in Q1'23, going forward, most of the possibilities would be detrimental to at least one of the two.

IMPORTANT DISCLOSURES:

Please remember that past performance is no guarantee of future results. **PLEASE NOTE:** Different types of investments and/or investment strategies involve varying degrees of risk and volatility, and at any specific point in time, or over any specific time-period, any investment or investment strategy can and will suffer losses, at times substantial losses. Positive performance should be considered secondary. If you cannot tolerate the volatility and risks associated with a specific strategy, Grimes will introduce a different Strategy to you for your consideration.
