2024 Outlook Theme #1: The Market Digests the Fed

By Benjamin B. Wallace, CFA

Benjamin B. Wallace, CFA - Portfolio Manager, Research Director

Shifting expectations on Federal Reserve policy has been a major market driver in the first half of 2024. The markets started the year with too optimistic an outlook on Fed rate cut expectations and had to adjust.

One way to assess the shifting Fed policy expectations is to compare the yield on the 1-month T-Bill today (a good measure of where Fed Funds currently are) to the 1-year forward rate, or where markets think the 1yr Treasury yield will be in 12 months. The 1-year forward rate is calculated by looking at the current 1yr and 2yr rate, then finding the rate that links them.

Chart 1

At the end of 2023, with the 1-month T-Bill at 5.40% and the forward 1-yr rate at 3.72%, the discount was a record 1.67%. Fast forward to 6/30/24, and that discount has declined to 1.00%, as the forward 1-year rate has risen to 4.34%. In other

words, the market has gone from pricing 7 rate cuts (1.67% is approximately seven 25 bps rate cuts) by the end of 2024, to just four by June 2025. When the year started, the markets were looking for 6 or 7 rate cuts as the Fed said three. Now, markets are more in line with the Fed’s 1-2 2024 rate cuts. This shifting policy outlook has contributed to stock and bond market volatility, while making every inflation release, unemployment report, and Fed meeting a potential market moving event.

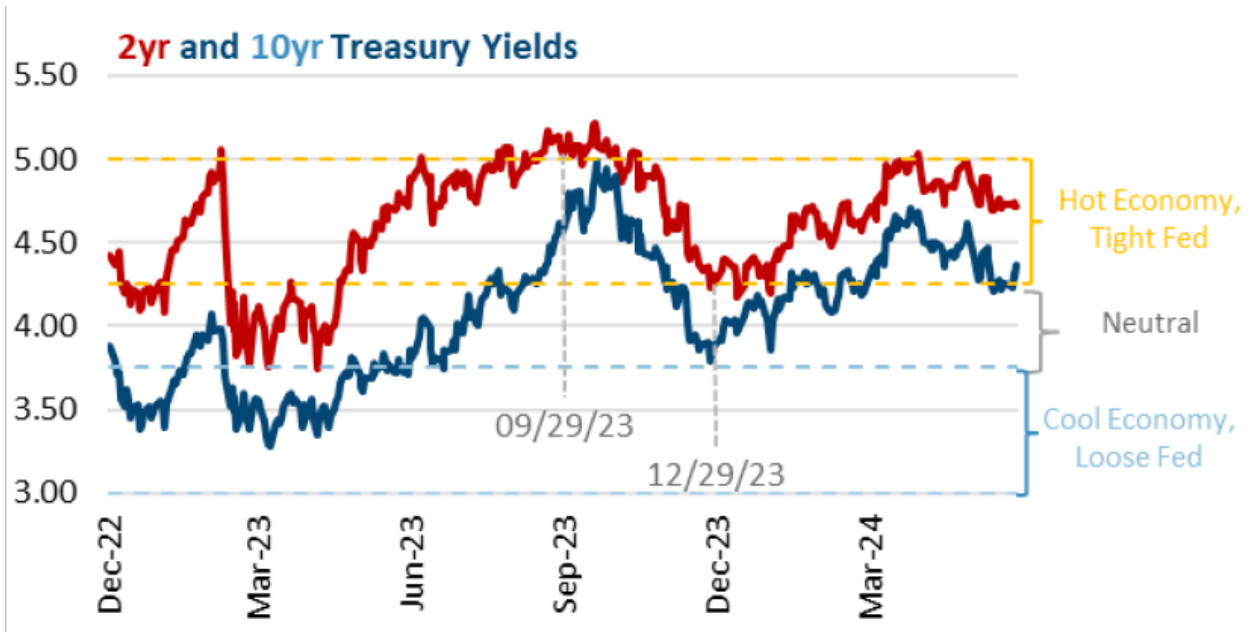

Chart 2

Rather than speculate about Fed policy, we look at what type of economy and Fed policy is priced into the markets, and then consider whether that is a reasonable outlook and thus if investors are being properly compensated. Assuming 2% inflation and 2% trend growth (the Fed’s two long term assumptions), we get a 4% neutral interest rate, with a 50 bps 3.75% to 4.25% neutral range. Second, we look at the 2yr yield as a proxy for Fed policy, and the 10yr yield as a proxy for the economy. Based on where the 2yr is relative to our neutral range, we can gauge the market’s view of Fed policy, while the 10yr shows what type of economy the market is pricing.

Chart 2 shows these two rates, as well as an orange “Hot Economy, Tight Fed” range of 4.25% to 5.00%, and a blue “Cool Economy, Loose Fed” range of 3.00% to 3.75%. The two highlighted dates show how this thought process can be beneficial.

We have swung from 9/29/23, where a tight Fed and hot economy were priced, to 12/29/23, when the market had shifted all the way to forecasting 6 or 7 rate cuts and a slowing economy. The 10yr had dropped to 3.88%, the bottom of the neutral range. At these levels, for investors to be compensated it would require the economy to enter a recession.

Thus far in 2024, stronger inflation readings to start the year pushed the 10yr as high as 4.75% and the 2yr to 5% (suggesting no rate cuts) in April. Subsequently, cooler inflation data has seen the 10yr reach the upper end of the

“Neutral” range of 4.25%, while the lower 2yr suggests the market are starting to price a looser Fed again.

As of 6/29/24, the 4.37% 10yr is in line with a “soft landing” scenario of slower growth and less inflation, but no recession. Its vulnerable to stronger data, which would push rates back towards 5%. Conversely, since a recession would push rates below 4%, bonds could deliver positive returns in such a scenario. Meanwhile, the 4.72% 2yr is in line with one or two 2024 rate cuts, which is also a reasonable expectation. Combined, the bond market enters the second half of 2024 with a relatively balanced outlook as *The Market Digests the Fed*.
