## 9/30/24 Focal Point: Investors can Broaden Their Horizons Beyond the Narrow Market

By Benjamin B. Wallace, CFA

**Benjamin B. Wallace, CFA - Portfolio Manager, Research Director**

The implications of the narrow market were discussed in the [6/30/24 Focal Point: It is Hard to Escape the Impact of the Narrow Market](#), where returns have been dominated by a small group of large stocks, referred to as the Mag7. This market concentration is evident when comparing the S&P 500 (which is capitalization weighted) to the Equal Weight (EW) S&P 500 (with the same members, but each has an equal 0.2% contribution).

The impact extends beyond just returns. Chart 1 shows the S&P 500 and S&P EW PE ratios, as well as the S&P 500's premium to the S&P EW (in red, on the right-hand scale). The gap slightly narrowed in Q3'24, but remains relatively wide, at 25%, just below its 31% peak.

While the gap has declined, market concentration is still impacting the broader market.

**S&P 500 vs S&P Equal Weight PE Ratios and Premium**

Chart 1

Chart 2 shows the earnings yield on the S&P 500, the yield on the 10yr Treasury, and the difference between the two, known as the Equity Premium. A higher Equity Premium means stock investors are getting more compensation relative to bonds. From 2002 to 2007, prior to the Fed’s QE interventions, a 1-3% Equity Premium was common. Q3’s decline in the 10yr managed to boost the Equity Premium from its end of Q2’24 low of 0.37% to 0.83%. While this is still a low level, it demonstrates how declining interest rates supported Equity prices during the quarter, although the Equity Premium remains low, suggesting stock valuations are stretched.

Chart 2

The same analysis can be performed on the other major indices. Chart 3 shows the earnings premiums for the Russell 2000, the MSCI EAFE and MSCI Emerging Markets, along with the S&P 500.

**Equity Index Earnings Premiums to 10yr Tsy**

Chart 3

While all four major indices have declined from their unusual levels of 2010-2020, only the S&P 500 is below its 2003-2007 range.

This is evident in the following table.

	S&P 500	R 2K	EAFE	EM	S&P EW
9/30/2024	0.8%	2.6%	3.3%	4.1%	2.0%
2003-2007 Avg	2.1%	2.5%	3.0%	4.1%	

Only the S&P 500 is below its 2003-2007 average. It is also notable that the S&P EW, at 2.0%, is in line with the 2003-2007 S&P 500 average, another indicator that there is a reason to stay diversified and have exposure to stocks beyond the Mag7.

During Q3, the relative outperformance of the S&P Equalweight (+9%) over the S&P 500 (+6%), as well as the Russell 2000 (+9%), MSCI Emerging Markets (+9%) and the MSCI EAFE (+7%), are a small reminder of the benefits of diversification, though all these indices lag the S&P 500 on a YTD basis. Layered on top of the past few years of S&P 500 dominance, this may not always seem evident to investors. Yet the valuation data above shows large parts of the stock market are appealing. On top of that, for the first time in over a decade, bond yields are appealing as well.

The common theme of both Equity and Fixed Income markets is that, after the Fed raised rates and a period of adjustment, the rate backdrop, stock valuations and bond yields are broadly back to pre-GFC levels. On the assumption that the post GFC period (from 2010-2019) was distorted by the Fed's QE policy artificially depressing interest rates and distorting valuations, this reversion to 2003-2007 levels is a sign Fed policy, and markets, have normalized.

This does not mean every asset class is properly, or perfectly, priced. Depending on the economy's path, certain asset classes will outperform while others lag. Cumulatively, though, asset classes reflect a reasonable expectation of Fed policy and the economy, and the diversification benefit of various asset classes means a properly constructed portfolio offers reasonable return potential.

This is why *Investors can Broaden Their Horizons Beyond the Narrow Market.*

#### IMPORTANT DISCLOSURES:

Please remember that past performance is no guarantee of future results. Different types of investments involve varying degrees of risk, and there can be no assurance that the future performance of any specific investment, investment strategy, or product (including the investments and/or investment strategies recommended or undertaken by Grimes & Company, Inc. ["Grimes"]), or any non-investment related content, made reference to directly or indirectly in this commentary will be profitable, equal any corresponding indicated historical performance level(s), be suitable for your portfolio or individual situation, or prove successful.
